

# QUBO Matrices for Prefix-Free Code Optimization

Three Problem Configurations: Base, Intermediate, and Advanced (Abecedary)

| Case                      | N (Symbols) | L (Max Length) | Variables | Forbidden Prefixes | Offset |
|---------------------------|-------------|----------------|-----------|--------------------|--------|
| Base Case                 | 8           | 4              | 62        | None               | 24.00  |
| Intermediate Case         | 8           | 4              | 55        | 11                 | 24.00  |
| Advanced Case (Abecedary) | 24          | 6              | 239       | 11                 | 72.00  |

## Problem Overview

These matrices represent QUBO formulations for finding optimal prefix-free binary codes. The objective is to minimize expected codeword length while ensuring prefix-free constraints. The three cases demonstrate increasing complexity:

- **Base Case:** Standard formulation with N=8 symbols and L=4 maximum length, no restrictions
- **Intermediate Case:** Same as Base but with forbidden prefix "11" restriction (N=8, L=4)
- **Advanced Case (Abecedary):** Larger instance with N=24 symbols, L=6 maximum length, abecedary dictionary structure, and forbidden prefix "11"

## Base Case

| Parameter               | Value   |
|-------------------------|---------|
| Number of Symbols (N)   | 8       |
| Maximum Code Length (L) | 4       |
| Total Variables         | 62      |
| Matrix Dimensions       | 62 × 62 |
| Offset                  | 24.0000 |
| Forbidden Prefixes      | None    |
| lambda_A (Assignment)   | 3.0     |
| lambda_C (Coupling)     | 3.0     |
| lambda_P (Prefix)       | 5.0     |
| lambda_O (Order)        | 3.0     |
